DEMO PREMARITAL SCREENING LAB

Expanded carrier screening report - FICTIONAL DEMO, NOT A REAL PERSON

Name: Omar (demo) | Sex: Male | Date of birth: 11/12/1996
Report date: 05/11/2026 | Sample: blood | Panel: 10-gene demo panel

RESULTS

Gene	Variant	Classification	Status
BTD	Fictional demo variant	Uncertain significance	Uncertain

No pathogenic variants detected in: HBB, CFTR, GJB2, SMN1, PAH, HEXA, CYP21A2, G6PD, DMD.

INTERPRETATION

Being a carrier usually has no effect on your own health.
A child can be affected only if both parents carry a change in the same gene.
Genetic counselling is recommended to discuss these results with your partner.

This is a fictional report generated for the BioSentinel Family demo. It contains no real person's data.
